

COURSE 3 - DATA ENGINEERING 2026**C3-07 - Targeted Remediation Cards**

Repair only the failed competency, then complete a changed micro-retest.

Artifact	C3-07-REPAIR
Status	2026 - LEARNER EDITION
Phase	C3-07 Cloud & Microsoft Fabric Data Engineering 15 lessons 50-70 focused hours
Prerequisite	C3-06 Gate PASS; C2B cloud foundations are recalled, while Fabric implementation is taught from first principles.
Current lane	Microsoft Fabric docs refreshed 2026-09-11 trial 60 days F4/F64 up to 1 TB OneLake
Brand	Charcoal #1F2937 Teal #14B8A6 Soft Blue #3B82F6 AMOLED #000

House teaching rule: mental picture -> tiny example -> guided Fabric action -> expected result -> why it worked -> break/fix -> independent changed case -> validation -> security/production reasoning -> evidence. A portal screenshot is not mastery unless the underlying data, identity, lifecycle and recovery claim is independently verified.

Repair routes

A Architecture

Redraw storage/compute/network/identity and item ownership before changing portal settings.

B Data correctness

Return to source grain, stable key, incremental state and independent reconciliation.

C Serving/event query

Rebuild the smallest SQL/KQL control and compare to trusted source totals/events.

D Lifecycle

Separate tracked definitions from data, remap environment references and run a post-deploy smoke.

E Security

Test as intended consumer identity; inspect every grant path; reduce broad workspace privileges.

F Observability

Start from one failed run and trace run history/error -> root cause -> recovery -> post-recovery control.

G Capacity

Use Capacity Metrics/run duration/throughput evidence before changing concurrency/schedule.

H Handoff

Recreate from README/definitions with a fresh environment-specific configuration.
